

Database Management Systems

A Database Management System (DBMS) is software used to store and manage data efficiently.

Relational databases organize data into tables with rows and columns.

SQL is the standard language used to query and manage relational databases.

Normalization reduces redundancy and improves data consistency.

Popular DBMS software includes MySQL, PostgreSQL, Oracle, and MongoDB.

Topic	Importance
Concept Understanding	Builds foundational CS knowledge
Practical Usage	Useful for projects and applications
Career Relevance	Important for technical interviews
