

Basics of Machine Learning

Machine Learning is a field of Artificial Intelligence that allows systems to learn from data.

Supervised learning uses labeled datasets to train models for prediction tasks.

Unsupervised learning finds hidden patterns in data without labels.

Popular algorithms include Linear Regression, Decision Trees, and Neural Networks.

Machine Learning is widely used in healthcare, finance, recommendation systems, and robotics.

Topic	Importance
Concept Understanding	Builds foundational CS knowledge
Practical Usage	Useful for projects and applications
Career Relevance	Important for technical interviews
